

# ARX manager

## Professional device for personal use

ARX manager is innovative product, which can be managed by your mobile phone, it enables safe and comfortable way to enter your apartment, house or office. This is a first professional biometric reader, which combines practicability of biometric technology and mobile phone.

ARX manager uses a French producer ID3 biometric technology, which was one of the best on USA MINEX testing, performed by US government (National Institute of Standards & Technology), meaning that this technology is certified for use in all US government institutions.

ARX manager has integrated bluetooth module and we can connect it with most mobile telephones or portable computers, which have a bluetooth connection. Because nowadays almost every mobile phone and portable computer has bluetooth connection, we can use this also for managing other devices. In our company, we have recognised this possibility and we have developed a biometric reader with top quality biometric technology and bluetooth connection.

ARX manager can be managed with most mobile phones and portable computers on the market. We only need to load a special software, and then we can connect and manipulate ARX manager. Software in your language, for different phones is available.

# ARX manager features

Managing with mobile phone or portable computer. Add/delete of users and administrators, as well as managing all other functions in device.

Enroll up to 100 users or administrators, each has a storage for 10 fingerprints available.

Activating up to three devices/doors with one reader and possibility of adjusting the activation time of each relay.

Connecting up to three readers on one internal device.

Checking the history of events on the device (in average 2000 events)

Triggering a silent alarm, in case of kidnaping.

# Technical data

Power supply	110/230 V~ 3 output relays, max current 3A, max. power on relay 40 V
Current consumption	min. 150 mA, max. 400 mA
Operating power	12 VDC
Operating temperature	-30°C - +80°C
Operating humidity	up to 90%
Exterior unit dimensions	79x79x62 mm
Interior unit dimensions	90x70x58 mm
Installation	Exterior unit on top of electrical mounting box 60mm, Interior unit on DIN rail inside fuse box (4 spaces)
Sensor type	ATMEL thermal fingerchip
Encryption type	128 bit rolling code
Memory type	Flash (fingerprints remain in the memory in case of power failure)
Identification level	professional (high level of minutiae)
Capacity	1000 fingerprints (100 users/administrators)
User interface	3 color LED, buzzer, Java application on mobile telephone/computer.
